# Bobi Privacy Policy

Effective date: November 4, 2026

## 1. Information and purposes

Bobi processes account identifiers and session information to sign you in; profiles, posts, photos, videos, comments, follows, crew activity and gifts to provide social features; and private messages to deliver mutual-follow chat. Notes and question history support your personal travel planning. Reports, blocks and limited technical or usage records support safety, security and service operation. Information you publish can be visible to other people; private chat is intended for its participants and is not advertised as end-to-end encrypted.

## 2. Permissions and choices

Camera, photo-library and microphone permissions support the features you choose. You can decline or change device permissions in Settings, with the relevant features affected. The video-call screen is currently a local preview, not a connected remote call. Avoid sharing sensitive personal information or another person's information without permission. Use the available profile, content, note, history, report and block controls to manage your activity.

## 3. AI features and third-party processing

When the optional AI Island Guide is enabled and you approve a request, Bobi sends your question and relevant island information through its Supabase cloud service to Groq to generate a travel answer. This integration does not attach your account identifier, private messages, photos or videos to Groq requests. Anything you type in a question is included, so do not enter sensitive details. You can decline each request or stop using AI to prevent future AI sharing; other independent features remain available.

Question history is stored in Supabase with owner access. Bobi's inference service does not save generated answers; an answer is saved when you choose to save it as a note. Usage counters and temporary request records help enforce allowances. Removing app history or notes does not automatically delete all provider logs or backups.

Groq's customer-data guidance says inference inputs and outputs are not retained by default, but may be retained for reliability or abuse investigations. Its published guidance describes such logs as retained for up to 30 days unless legally required longer, and says usage metadata is retained. Groq's Services Agreement restricts training or fine-tuning on inputs and outputs unless the customer explicitly permits or instructs it. Actual processing is subject to the applicable agreement and account settings; Bobi does not promise absolute zero retention or universal deletion. These statements do not imply that a special zero-retention setting has been enabled.

Groq's official customer documents: Your Data, Data Processing Addendum, and Services Agreement.

## 4. Infrastructure, transfers and retention

Supabase provides authentication, database, storage and messaging infrastructure. Bobi's primary Supabase project is located in Singapore; this does not mean every service operation is confined there. Groq's guidance identifies the United States as the location of retained customer data, and its DPA permits processing in the United States and other countries where it or its subprocessors operate. Processing may therefore cross borders.

Bobi uses access controls and encrypted network connections, but no service is perfectly secure. Data is kept for the features it supports and for applicable security, operational and legal needs. Backup and provider retention can differ from visible app data. No fixed universal deletion deadline is promised here.

## 5. Your controls, updates and contact

Use the available in-app controls to view or edit your profile and manage your content, notes and question history. The Delete Account control requests removal of your account and user-owned content from Bobi's active service. Backup copies and provider logs remain subject to the retention limits described above. Device permissions and AI choices control future optional sharing. Privacy rights, including access, correction, deletion or complaint rights, depend on applicable law. Proposed privacy contact: support@bobi.com (not yet active); a working contact channel is still pending. This policy will carry a new effective date when updated.
